1976 Computer Design Index

An up-to-date listing of editorial features published this year

COMPONENTS

Optical Components

Enormous Bucket-Brigade Optical Scanner Achieves High Efficiency, B. J. Deliduka .....Feb, p 89

Power Sources and Regulators

Form Factor of Switching Power Supply Meets User Requirements for Diverse Designs .....July, p 142

Protecting Minicomputers From Power Line Perturbations, R. M. Teets .....June, p 99

Synchros and Resolvers

Digital Measurement of Shaft Position: Synchros and Resolvers or Encoders, S. Davis .....Feb, p 50

COMPUTERS

Automatic Test Systems

Programmable Calculators Control Electronic Systems Testing, P. Chuhnov .....Jan, p 73

Educational Computers

Verbal Communication System Enhances Computer/Student Interaction, M. J. Freeman and G. P. Mulkowsky .....Jan, p 81

General

Associative Processors: A Panacea or a Specific? L. C. Higbie .....July, p 75

Evolution of Microprogrammed Input/Output Processing in One Processor Family, R. Vahlstrom and M. Malone .....Jan, p 98

Matrix Computations Forecast Computer Mainframe Reliability, R. Sharan .....Aug, p 95

Procedure Evaluates Computers for Scientific Applications, L. Wolin .....Nov, p 93

Top-Down Design Streamlines Digital System Projects, M. L. Fichtenbaum .....Sept, p 91

Trends in Computer Hardware Technology, D. A. Hodges .....Feb, p 77

Hybrid Computers and Systems

Digital Simulator Replaces Analog Portion of Hybrid Computer, B. R. Gilbert and M. J. Morse .....Apr, p 91

Multivariable Function Generation for Hybrid Computers, A. I. Rubin .....Feb, p 99

Microcomputers

(For Microprocessors see under Digital Circuits)

Adapter Simplifies Development of Microprocessor Systems, R. L. Morrison and C. A. Wiatrowski .....May, p 175

Economic Alternatives in Microcomputer Design, J. L. Nichols .....Apr, p 110

Hybrid/LSI Package Yields a Single-Component Microcomputer, F. I. Redding and F. G. Snyder .....Apr, p 114

Macro Processor Simplifies Microcomputer Programming, N. Sohrabji .....Aug, p 108

Microprocessors Aid Experimentation in Scientific Laboratory, T. A. Seim .....Sept, p 83

Printed Circuit Board Instrument Analyzes Microcomputer-Based Systems Online .....Apr, p 142

Putting a Microcomputer on a Single Chip, H.A. Raphael .....Dec, p 59

Testing Microcomputer Boards Automatically, E. B. Foley, Jr and A. H. Firman .....Dec, p 92

Microprocessors/Microcomputers

Computer Interfacing: Anatomy of a Microcomputer .....Feb, p 128

Generating Input/Output Device Select Pulses for Microcomputer Interfacing .....May, p 196

Microcomputer Interfacing: A Software UART.....Oct, p 118

Microcomputer Interfacing: Accumulator I/O Versus Memory I/O .....June, p 114

Microcomputer Interfacing: How Does a Microcomputer Make a Decision? .....Aug, p 118

Microcomputer Interfacing: Interfacing a Digital Multimeter .....Sept, p 114

Microcomputer Interfacing: Microcomputer Interrupts .....Nov, p 142

Microcomputer Interfacing: The Substitution of Software for Hardware .....July, p 120

Microcomputer Interfacing: The Vectored Interrupt .....Dec, p 112

Microcomputer Interfacing: The 8080 Microcomputer Output Instruction .....Apr, p 128

Microprocessors: Where Do They Fit? .....Jan, p 108

What is a Microcomputer Input/Output Device? ..Mar, p 112

Minicomputers and Small Computers

Low Power Computers: A Make or Buy Decision, J. Washburn.....Nov, p 120
Medium Scale Computer Features Six Microprocessor Chips in CPU .....May, p 212
Protecting Minicomputers From Power Line Perturbations, R. M. Teets .....June, p 99
Small But Very Fast Minicomputer Offers Large-Machine Performance .....Nov, p 160
System-Level Integration Shrinks Size and Cost of Medium-Scale Computer, G. Hoff .....Apr, p 81

Other Classes of Digital Computers

Architecture of Aerospace Computer Simplifies Programming, H. C. Kancler .....May, p 159

CONFERENCES

COMPCON 76 Spring: IEEE Computer Society International Conference .....Feb, p 67
COMPCON 76 Fall: IEEE Computer Society International Conference .....Aug, p 74
ELECTRO 76: IEEE International Convention and Exposition .....Apr, p 64
IEDM 76: IEEE International Electron Devices Meeting .....Nov, p 74
ISA 76: Instrument Society of America Conference and Exhibit .....Oct, p 72
ISSCC 76: IEEE International Solid-State Circuits Conference .....Jan, p 54
NCC 76: National Computer Conference .....May, p 104
SID 76: Society for Information Display International Symposium .....Apr, p 74
WESCON 76: Western Electronic Show and Convention .....Aug, p 66

DATA COMMUNICATIONS

Communications Systems

"Pacuit" Switching Combines Two Techniques in One Network, J. de Smet and R. W. Sanders .....June, p 83

Data Communications Monitors

High Speed Data Word Monitor, NASA .....Sept, p 110

General

Generation of Key in Cryptographic System for Secure Communications, NASA .....July, p 114
Intelligent Data Storage Device Functions As Programmable Communication System .....Dec, p 130
Competitive Dialed Services .....Mar, p 11
Computer Communications Inquiry .....Oct, p 10
Computerized PBX Systems .....May, p 14
Dialed Digital Data Channels .....Apr, p 10
Dynamic Multiplexing Applications .....Nov, p 14
Implications of the Communications Reform Act ..Sept, p 14
Interconnection Certification .....Jan, p 14
In-WATS System Access .....Aug, p 16
Local System Access .....Dec, p 20
Microcomputer Converter .....Feb, p 12
Private Line Tariff Revisions .....July, p 10
Satellite Business Systems .....June, p 10

DIGITAL CIRCUITS

Circuit Test Equipment

Considerations in Semiconductor Tester Selection, D. Alvarez .....Dec, p 69

Interface ICs

Programmable Interface Drivers Simplify Logic Testing, D. T. Kan .....July, p 106

LSI Circuits

Impact of LSI on Terminal Architecture, P. G. Cook and T. B. Cheek .....Nov, p 103
The Changing World of Advanced LSI .....Nov, p 134

Memory ICs

1K CMOS RAM Combines Fast Access Time and Low Power Consumption .....Mar, p 128

Microprocessors
(For Microcomputers see under Computers)

A Flexible Approach to Microprocessor Testing, B. Schusheim .....Mar, p 67
Challenges in Microprocessor System Design, T. Jones and P. Thomas .....Nov, p 109
Hardware Versus Software for Microprocessor I/O, J. L. Nichols .....Aug, p 102
Multi-Level Nesting of Subroutines in a One-Level Microprocessor, P. de Marchin .....Feb, p 118
Programming Hints Ease Use of Familiar Microprocessor, B. Gladstone and P. D. Page .....Aug, p 77
Putting a Microcomputer on a Single Chip, H. A. Raphael .....Dec, p 59
Software Support for Microprocessors Poses New Design Choices, E. S. Nauful .....Oct, p 93
System Languages for Microprocessors: Considerations and Trends, Editorial Staff .....July, p 87
Using a Microprocessor at Speeds Beyond its Apparent Intrinsic Limit, M. Schwartz and K. Winter .....June, p 106

Other ICs

A Hybrid General-Purpose Bit Synchronizer, NASA .....Apr, p 126
Synchronizer for Random Binary Data, NASA ....July, p 118

DIGITAL MATHEMATICS

Arithmetic

Shortcut to Logarithms Combines Table Lookup and Computation, S. Shi .....May, p 184

Information Theory

Automatic Error Correction in Memory Systems, B. Rickard .....May, p 179
Calculating an Error-Checking Character in Software, S. Vasa .....May, p 190
Generation of Key in Cryptographic System for Secure Communications, NASA .....July, p 114
Group Coded Recording Reliability Doubles Diskette Capacity, P. S. Sidhu .....Dec, p 84
Matrix Computations Forecast Computer Mainframe Reliability, R. Sharan .....Aug, p 95
New Error-Correcting Technique for Solid-State Memories Saves Hardware, G. R. Basham .....Oct, p 110
Simple Encoding Schemes Double Capacity of a Flexible Disc, D. J. Kalstrom .....Sept, p 98
Tradeoffs Among Binary Codes in Magnetic Tape Cassettes, J. J. Pastoriza .....Jan, p 102

INPUT/OUTPUT AND RELATED EQUIPMENT

Controllers

Simplified Floppy-Disc Controller for Microcomputers, T. H. Kehl and L. Dunkel .....June, p 91

Display Equipment

Impact of LSI on Terminal Architecture, P. G. Cook and T. B. Cheek .....Nov, p 103

General

Evolution of Microprogrammed Input/Output Processing in One Processor Family, R. Vahlstrom and M. Malone .....Jan, p 98

Hardware Versus Software for Microprocessor I/O, J. L. Nichols .....Aug, p 102

Technical Factors in Selecting Components for Mixed Systems, D. Hamblen .....Mar, p 100

Graphic Equipment

Microprocessor Control of Graphics Terminal Permits Display Flexibility .....June, p 130

Other Input/Output Equipment

Enormous Bucket-Brigade Optical Scanner Achieves High Efficiency, B. J. Deliduka .....Feb, p 89

Minicomputer Peripheral Aids Program Debugging, S. R. Alpert .....Sept, p 104

Printers

High Speed Line Printers are Price Compatible With Minicomputer Systems .....Jan, p 114

Punch Card Equipment

Single Unit Card Reader/Printer Serves as Low Price I/O Device .....Feb, p 138

INSTRUMENTATION AND CONTROL

Analog-Digital and Digital-Analog Conversion Equipment

Digital-to-Analog Converters: Some Problems in Producing High-Fidelity Systems, R. P. Talambiras .....Jan, p 63

Power DACs Provide Programmable Voltages for Minicomputer-Controlled Test Equipment.....Aug, p 136

Data and Signal Generators

Programmable Sequence Generator Comprises Three Integrated Circuits, S. Waser .....Apr, p 124

Digital Equipment Testers

A Flexible Approach to Microprocessor Testing, B. Schusheim .....Mar, p 67

Considerations in Semiconductor Tester Selection, D. Alvarez .....Dec, p 69

How Computers Can Test Their Own Memories, R. C. Goldblatt .....July, p 69

Moving Inversions Test Pattern is Thorough, Yet Speedy, J. H. de Jonge and A. J. Smulders .....May, p 169

Printed Circuit Board Instrument Analyzes Microcomputer-Based Systems Online .....Apr, p 142

Programmable Interface Drivers Simplify Logic Testing, D. T. Kan .....July, p 106

Testing Microcomputer Boards Automatically, E. B. Foley, Jr and A. H. Firman .....Dec, p 92

The Logic Analyzer: A Computer Troubleshooting Tool, N. A. Robin .....Mar, p 89

General

Programmable Calculators Control Electronic System Testing, P. Chuhnov .....Jan, p 73

Monitoring and Control Equipment

Automated Laboratory Testing System Reports Results Verbally .....Apr, p 44

Computer Complex Automates and Protects Rapid Transit System .....Oct, p 54

Computerized Graphic Display System Aids in Automatic Design of Tractor Parts .....July, p 64

Custody Transfer of Crude Oil Automated by Minicomputer .....June, p 66

Decision-Making With Flags in Process Control, L. F. Donaghey, G. M. Bobba, and X. K. Rubin .....Dec, p 77

Digital Measurement of Shaft Position: Synchros and Resolvers or Encoders, S. Davis .....Feb, p 50

Dual-Computer System Provides Continuous Control of Cement Plant .....July, p 54

International Industrial Computer Systems Workshop Summary .....Jan, p 50

Microcomputers Replace Gas Station Attendants .....Aug, p 57

Microprocessor-Based Design Eases System Growth from Loop-Level Configuration to Full-Plant DDC .....Jan, p 44

Microprocessor-Controlled Instrument Monitors Exhaust Gas Temperatures .....July, p 66

Microprocessor-Controlled System Diagnoses Tugboat Engine Malfunctions .....June, p 58

Microprocessor Solves Batch Mixing Problems for Supplier of Bread Ingredients .....Dec, p 48

Microprocessors and LSI Devices Are Prime Contributors to Design of Automatic Bowling Scorer .....Sept, p 50

Portable CRT Panel Performs Online Debugging and Editing of Programmable Controllers .....Oct, p 140

Professional Group Conference Stresses Microprocessor Applications for Process Control, S. F. Shapiro .....May, p 84

Reliability of Energy Control Center Is Proven By Time .....Apr, p 54

Self-Checking Tandem Minicomputers Maintain Security System in High-Rise Office Building .....Mar, p 42

Television Network Automated by Minicomputer-Controlled Channels .....Nov, p 50

Oscilloscopes

Tools for Logic Analysis, J. Wagner .....Feb, p 108

MATERIALS

Magnetic Materials

New Magnetic Materials Help Core Memories Stay Alive, R. D. Thuras .....July, p 100

MEMORY/STORAGE

Flexible Disc Storage

A Method of High Density Recording on Flexible Magnetic Discs, R. C. Franchini and D. L. Wartner .....Oct, p 106

Group Coded Recording Reliability Doubles Diskette Capacity, P. S. Sidhu .....Dec, p 84

SYSTEMS DESIGN ENGINEERS

To analyze both hardware and software designs to guide effective system tradeoffs and determine system performance based on hardware/software constraints. Will provide design support to the product development groups.

A BS/MS degree with a knowledge of both hardware and software development areas is required. In addition, experience in system formulation and proposal generation is necessary.

These positions will support the introduction of the next generation retail Point-of-Sale system and offer a highly visible work situation.

SOFTWARE DEVELOPMENT

FOR A

SOFTWARE SPECIALIST

IN NEW

PRODUCT DEVELOPMENT

To design and develop microprocessor operating systems for next generation retail terminal system. Will define system requirements and interfaces through negotiations with the system and hardware designers. Perform the necessary elements of design, research basic systems flow, documentation, coding and system testing. Your experience should be in assembly level programming as well as some procedural language (PL-1, COBOL, ALGOL, JOVIAL). In addition, experience in operating system development, preferably in the mini-microcomputer area.

A degree (Computer Science, Computer Engineering, Elec. Engineering) and from 2-6 years professional work experience will round out your qualifications.

The retail P.O.S. market is an exploding one and we invite you to respond as soon as practical.

Robert W. Donovan

Terminal Systems Division—Cambridge

NCR Corporation

Cambridge, Ohio 43725

614/439-0398

NCR

An Equal Opportunity Employer

Simple Encoding Schemes Double Capacity of a Flexible Disc, D. J. Kalstrom .....Sept, p 98

Simplified Floppy-Disc Controller for Microcomputers, T. H. Kehl and L. Dunkel .....June, p 91

Small Floppy Disc Drive Meets Microcomputer System Requirements .....Sept, p 134

General

Clearing Up the Confusion: Virtual vs Mapped Memory, D. J. Tanner .....Oct, p 101

Magnetic Core Storage

New Magnetic Materials Help Core Memories Stay Alive, R. D. Thuras .....July, p 100

Magnetic Domain Memories

Designing a Magnetic Bubble Data Recorder, Part 1—The Component Level, E. J. Hoffman, R. C. Moore, and T. L. McGovern .....Mar, p 77

Designing a Magnetic Bubble Data Recorder, Part 2—The System Level, E. J. Hoffman, R. C. Moore, and T. L. McGovern .....Apr, p 99

Magnetic Bubble Systems Approach Practical Use, J. E. Juliussen .....Oct, p 81

Open Coil Structure for Bubble-Memory-Device Packaging, NASA .....Sept, p 112

Stripe-Line Coil for Magnetic-Field Generation in Bubble Memory Devices, NASA .....July, p 116

Magnetic Tape Storage

New Method for Magnetic Encoding Combines Advantages of Older Techniques, A. M. Patel ....Aug, p 85

Tradeoffs Among Binary Codes in Magnetic Tape Cassettes, J. J. Pastoriza .....Jan, p 102

Memory Test Equipment

How Computers Can Test Their Own Memories, R. C. Goldblatt .....July, p 69

Read-Only Storage

Adapter Simplifies Development of Microprocessor Systems, R. L. Morrison and C. A. Wiatrowski .....May, p 175

Semiconductor Storage

Automatic Error Correction in Memory Systems, B. Rickard .....May, p 179

CCDs in Memory Systems Move into Sight, H. R. Crouch, J. B. Cornett, Jr, and R. S. Eward .....Sept, p 75

New Error-Correcting Technique for Solid-State Memories Saves Hardware, G. R. Basham .....Oct, p 110

1K CMOS RAM Combines Fast Access Time and Low Power Consumption .....Mar, p 128

NON-EQUIPMENT

Software

Calculating an Error-Checking Character in Software, S. Vasa .....May, p 190

Macro Processor Simplifies Microcomputer Programming, N. Sohrabji .....Aug, p 108

Minicomputer Peripheral Aids Program Debugging, S. R. Alpert .....Sept, p 104

Moving Inversions Test Pattern is Thorough, Yet Speedy, J. H. de Jonge and A. J. Smulders .....May, p 169

Programming Hints Ease Use of Familiar Microprocessor, B. Gladstone and P. D. Page .....Aug, p 77

Software Support for Microprocessors Poses New Design Choices, E. S. Nauful .....Oct, p 93

System Languages for Microprocessors: Considerations and Trends, Editorial Staff .....July, p 87
